

## **Carbon Disclosure Project elects Marfrig Group "Disclosure Leader" on Climate Change**

*The company achieved the highest score in the industry for the quality and details of its environmental information*

São Paulo, October 11, 2013 – The Carbon Disclosure Project (CDP), an international nonprofit organization dedicated to developing and providing global systems for measuring, disclosing, managing and sharing environmental information, elected the Marfrig Group a "Disclosure Leader" in the CDP Brazil Climate Change Report 2013. The organization recognized the ten Brazilian companies that achieved the highest scores for reporting data with the highest levels of detail and completeness on the questionnaire. The Marfrig Group, the only company in the food industry to figure among the top 10 Brazilian companies in transparency, scored 87 points.

The actions implemented by the company, such as its annual inventory of greenhouse gas emissions under scopes 1, 2 and 3 and the management of its supply chain in the Amazon Region, which mitigates the environmental impacts generated by its operations, contributed to this recognition from the CDP.

Since 2010, the Marfrig Group is a member of the CDP Brazil, the local arm of the international organization, whose objective is to motivate companies and cities to measure and disclose their impacts on the environment and natural resources in order to discover ways to reduce them.

Today, more than 4,500 organizations around the world report climate data to the CDP. These data allow investors, companies and governments to mitigate the risks posed by their consumption of energy and natural resources and to identify opportunities for adopting a more responsible approach to environmental issues.

### **History**

The Marfrig Group has conducted annual inventories of its greenhouse gas emissions 2010. In the first year, it measured emissions under scopes 1 (direct emissions from its processes) and 2 (indirect emissions from acquired energy).

In 2011, it started to also inventory its scope 3 emissions, which include emissions not directly controllable by the Company.

The inventory took about seven months to prepare and involved over 90 professionals from all of the Group's business segments around the world.

The 2012 inventory was audited by Société Générale de Surveillance (SGS), a global leader in process inspection, verification, testing and certification.
